**Blood Cancer!
Mixed African-
European Stem Cell
Donor Urgently
Needed!**

#MatchMyMix!

My name is Astrid (Ada). I was diagnosed with a particularly severe form of blood cancer – Acute Myeloid Leukemia (AML).

I am Nigerian-German and urgently **need an African-European/ African-Caucasian stem cell donor** who can help me to continue being there for my children, my husband and my friends. **Given the advanced nature of the disease, every day, every hour, every minute counts!**

It is extremely difficult for people of mixed ethnic origin to find a suitable donor. Less than 3% of people registered as donors worldwide have a mixed ethnic background.

If one parent of yours comes from West Africa and the other from Europe, you can help save my life with a stem cell donation.

Do these criteria apply to you? Then please register with your local country's stem cell registry.

I very much hope for your help! Your Astrid (Ada)

**The thought of not seeing
my little boys grow up
is unbearable to me.**
